Dear Customer

We offer you the strongest magnets in many shapes and sizes. Nearly all of our magnets are made of Neodymium Iron Boron (NdFeB). These are the strongest permanent magnets in existence. They are many times stronger than typical magnets.

You have to experience these magnets yourself in order to understand why they are called "super magnets".

This catalogue displays the same articles that are available in our web shop. You can find more detailed information and additional photos in the item descriptions at www.supermagnete.de. We have made every effort to simplify the order process for you.

I hope you enjoy your shopping experience!

Giant ring (actually closer to a disc with a drill hole), that is suitable for tying with a piece of cord. You can use this to fish your bicycle (and who knows what else) out of the canal.

Cone magnets neodymium

These neodymium magnets are cone-shaped. On the small circular area the magnetic field lines are bundled, which gives the magnets a very high adhesive force. They are perfectly suitable for whiteboards, magnetic boards, etc. The stump holds notes securely and it can be easily removed by pulling it off to the side. If the base is attached to a metal surface, however, it is hard to remove.

Waterproof neodymium magnets: rustproof & with scratch protection

The neodymium magnets in this group are entirely coated by a layer of rubber, which provides the following advantages:

Scratch protection: Delicate surfaces, such as whiteboards or magnetic glass boards, are well protected

Waterproof: These magnets are rustproof and can be used outdoors as long as the rubber coating stays intact

Friction: The rubber coat substantially increases the magnetic adhesive force in shear direction

Due to the rubber coating the maximum adhesive force of these magnets is slightly lower, however, compared to similar-sized neodymium magnets without coating.

Magnet sets

Please note: Due to the dangers of swallowing magnets, the magnets in this set are not suitable as toys for small children and must be kept out of their reach! If two or more magnets are swallowed they can get caught in the intestines and cause life-threatening injuries.

Z-10 Macho set magnet set case with 40 super magnets Weight: 1,4 kg/set	Price in EUR 1 set 59,99/set	For people who aren't easily impressed, we now have the supermagnete macho set! 10 large and 30 small super magnets in one tool case.

Sew-in magnets neodymium

Flat neodymium disc magnets, shrink-wrapped in sturdy plastic foil, to sew into clothing. Thanks to the plastic covering, the magnets are waterproof and rustproof and can be washed and used outdoors and in wet surroundings.

Screw-on neodymium magnets

Flat countersunk neodymium disc and block magnets with one or two boreholes can be fastened with a countersunk head screw. They are only 4 mm thick and therefore very discreet for hanging up signs, tools, etc. Screw-on magnets are very popular in the areas of kitchen installations, booth and store construction, signage technology, furniture construction, etc.

Ferrite ring magnets

All ferrite ring magnets have their south and north poles on the even circular surfaces (axial magnetisation).

Pot magnets with counterbore screw-on

Distinctive feature: These magnets can be fastened with a countersunk screw.

Principle: The magnets are embedded in a steel pot. The steel pot increases the adhesive force of the magnet on direct contact with a thick iron surface. If there is no direct contact with the counterpart, or if the steel plate is thin, painted or rough, you won't be able to put as much strain on it.

Shear force: The indicated adhesive force was measured perpendicular to the surface to which the magnet should stick. It takes a lot less strength to move the magnet sideways. Therefore, you won't be able to put as much strain on a pot magnet if you use it on a wall as opposed to using it on the ceiling.

Rust: These magnets are not rust-free and therefore intended for dry indoor use.

Hook magnets neodymium: strong & practical

Distinctive feature: These magnets can be used to hang up objects. The hook can be unscrewed. You can choose between the colours silver, white, black and green.

Principle: The magnets are embedded in a steel pot. The steel pot increases the adhesive force of the magnet on direct contact with a thick iron surface. If there is no direct contact with the counterpart, or if the steel plate is thin, painted or rough, the magnet will hold significantly less weight.

Shear force: The indicated adhesive force was measured perpendicular to the surface to which the magnet was attached. It takes a lot less strength to move the magnet sideways. Therefore, you won't be able to attach as much weight to a pot magnet when used on a wall as opposed to using it on the ceiling.

Rust: These magnets are not rust-proof and are intended for indoor use in dry conditions.

Pot magnets with threaded stud

Distinctive feature: These magnets have an external thread.

Principle: The magnets are embedded in a steel pot. The steel pot increases the adhesive force of the magnet on direct contact with a thick iron surface. If there is no direct contact with the counterpart, or if the steel plate is thin, painted or rough, you won't be able to put as much strain on it.

Shear force: The indicated adhesive force was measured perpendicular to the surface to which the magnet should stick. It takes a lot less strength to move the magnet sideways. Therefore, you won't be able to put as much strain on a pot magnet if you use it on a wall as opposed to using it on the ceiling.

Rust: These magnets are not rust-free and therefore intended for dry indoor use.

Channel magnets

Channel magnets are rectangular or square pot magnets that can be fastened with a countersunk head screw. They consist of a U-shaped steel profile into which a neodymium block magnet is embedded. This design strengthens the holding power of the magnet enormously at direct contact with a counterpart. Additionally, the steel coating protects the fragile magnet from damages caused by repeated blows.

Eyelet magnets neodymium

Distinctive feature: These magnets are suitable for securely hanging up objects. The eyelet can be removed. You can choose between silver-coloured and white eyelet magnets. The latter are barely noticeable on white walls and ceilings. The silver eyelet magnets are slightly cheaper and stronger.

Principle: The magnets are embedded in a steel pot. The steel pot increases the adhesive force of the magnet on direct contact with a thick iron surface. If there is no direct contact with the counterpart, or if the steel plate is thin, painted or rough, you won't be able to put as much strain on it.

Shear force: The indicated adhesive force was measured perpendicular to the surface to which the magnet should stick. It takes a lot less strength to move the magnet sideways. Therefore, you won't be able to put as much strain on a pot magnet if you use it on a wall as opposed to using it on the ceiling.

Rust: These magnets are not rust-proof and therefore intended for dry indoor use.

Pot magnets with internal thread

Distinctive feature: These magnets have a metric internal thread and can be fastened with objects with an external thread.

Principle: The magnets are embedded in a steel pot. The steel pot increases the adhesive force of the magnet on direct contact with a thick iron surface. If there is no direct contact with the counterpart, or if the steel plate is thin, painted or rough, you won't be able to put as much strain on it.

Shear force: The indicated adhesive force was measured perpendicular to the surface to which the magnet should stick. It takes a lot less strength to move the magnet sideways. Therefore, you won't be able to put as much strain on a pot magnet if you use it on a wall as opposed to using it on the ceiling.

Rust: These magnets are not rust-proof and therefore intended for dry indoor use.

Pot magnets with rubber coat

Distinctive feature: These magnets have a metric internal screw thread and can be fastened with objects with an external screw thread. The rubber coat protects the sensitive surface from scratches and increases the load capacity in shear direction.

Principle: The magnets are embedded in a steel pot. The steel pot increases the adhesive force of the magnet on direct contact with a thick iron surface. If there is no direct contact with the counterpart, or if the steel plate is thin, painted or rough, you won't be able to put as much strain on it.

Shear force: The indicated adhesive force was measured perpendicular to the surface to which the magnet should stick. Despite the rubber coat, it takes less strength to move the magnet sideways. Therefore, you won't be able to put as much strain on a pot magnet if you use it on a wall as opposed to using it on the ceiling.

Rust: The rubber protects the magnet from occasional moisture and splashing water. Permanent outside use, however, can lead to rusting.

Pot magnets with screw socket

Distinctive feature: These pot magnets have a screw socket, into which you can screw hooks, eyelets, etc. We also carry identical hook magnets as well as eyelet magnets.

Principle: The strong neodymium magnets are embedded in a steel pot. The steel pot increases the adhesive force of the magnet on direct contact with a thick iron surface. If there is no direct contact with the counterpart, or if the steel plate is thin, painted or rough, you won't be able to put as much strain on it.

Shear force: The indicated adhesive force was measured perpendicular to the surface to which the magnet should stick. It takes a lot less strength to move the magnet sideways. Therefore, you won't be able to put as much strain on a pot magnet if you use it on a wall as opposed to using it on the ceiling.

Rust: These magnets are not rust-proof and therefore intended for dry indoor use.

Pot magnets & magnet systems with ferrite magnets

Distinctive feature: These magnets are ferrite and not neodymium magnets. They have therefore a lower adhesive force and are larger. But are cheaper than neodymium magnets and can be used outside as well.

Principle: The magnets are embedded in a steel pot. The steel pot increases the adhesive force of the magnet on direct contact with a thick iron surface. If there is no direct contact with the counterpart, or if the steel plate is thin, painted or rough, you won't be able to put as much strain on it.

Shear force: The indicated adhesive force was measured perpendicular to the surface to which the magnet should stick. It takes a lot less strength to move the magnet sideways. Therefore, you won't be able to put as much strain on a pot magnet if you use it on a wall as opposed to using it on the ceiling.

Rust: These magnets are rust-proof and can therefore be used outside and in wet surroundings as well. The pots surrounding the magnets, however, may develop surface rust over time.

Screw-on metal discs & metal plates

These are not magnets! These metal discs are suitable as counterpart for our magnets, e.g. hook or block magnets with borehole.

They can be easily screwed onto non-magnetic surfaces with a countersunk bolt.

Self-adhesive metal discs: ideal counterparts for magnets

These metal discs are suitable as counterpart for our magnets, e.g. disc or hook magnets. Thanks to the self-adhesive back, they can be easily attached to smooth surfaces.

Rubber caps & silicone discs: Skid and scratch protection all in one

These rubber caps can be put over the bottom side of pot magnets to protect delicate surfaces, plus the friction increases the load capacity of the magnet in shear direction.
