## Dear Customer

We offer you the strongest magnets in many shapes and sizes. Nearly all of our magnets are made of Neodymium Iron Boron (NdFeB). These are the strongest permanent magnets in existence. They are many times stronger than typical magnets.

You have to experience these magnets yourself in order to understand why they are called "super magnets".

This catalogue displays the same articles that are available in our web shop. You can find more detailed information and additional photos in the item descriptions at [www.supermagnete.de](http://www.supermagnete.de). We have made every effort to simplify the order process for you.

I hope you enjoy your shopping experience!

After the order is placed, you will be transferred to the Klarna page. Payment requires a bank account that is enabled for online banking, your PIN and your TAN.

##### • PayPal

Payment will be completed at the end of the order over a secure connection.

##### • Amazon Pay

Payment will be completed at the end of the order over a secure connection.

Security during paymentThe PCI-DSS certificate certifies that supermagnete.de complies with the credit card industry's high security requirements.

#### Minimum order

The minimum order amount is EUR 15,00 (including VAT, not including shipping costs).

## Neodymium (NdFeB) disc magnets, small

Almost all disc magnets have their north and south poles on the even circular surfaces (axial magnetisation). The few exceptions that are diametrically magnetised are especially marked.

## Neodymium (NdFeB) disc magnets, large

Almost all disc magnets have their north and south poles on the even circular surfaces (axial magnetisation). The few exceptions that are diametrically magnetised are especially marked.

It is imperative that you carefully review the enclosed safety tips.</p>

## Cube magnets neodymium

All cube magnets have their north and south pole on two opposing surfaces.

<p><b>W-01-N</b> Cube magnet 1 mm Weight: 0,0076 g Nickel-plated (Ni-Cu-Ni) Magnetisation: N45 strength: approx. 37 g</p>	<p>Price in EUR 20 pcs. 0,21 ea. from 60 pcs. 0,17 ea. from 140 pcs. 0,15 ea. from 360 pcs. 0,13 ea.</p>	<p>They don't come much smaller than this! It's hard to believe, but this mini-magnet has the strength to pin a little note to the wall.</p>
<p><b>W-03-N</b> Cube magnet 3 mm Weight: 0,21 g Nickel-plated (Ni-Cu-Ni) Magnetisation: N45 strength: approx. 290 g</p>	<p>Price in EUR 20 pcs. 0,21 ea. from 60 pcs. 0,18 ea. from 140 pcs. 0,16 ea. from 360 pcs. 0,13 ea.</p>	
<p><b>W-04-N</b> Cube magnet 4 mm Weight: 0,49 g Nickel-plated (Ni-Cu-Ni) Magnetisation: N42 strength: approx. 500 g</p>	<p>Price in EUR 10 pcs. 0,31 ea. from 40 pcs. 0,25 ea. from 80 pcs. 0,22 ea. from 160 pcs. 0,20 ea.</p>	
<p><b>W-05-G</b> Cube magnet 5 mm Weight: 0,95 g Gold-plated (Ni-Cu-Ni-Au) Magnetisation: N42 strength: approx. 1,1 kg</p>	<p>Price in EUR 10 pcs. 0,44 ea. from 40 pcs. 0,36 ea. from 80 pcs. 0,33 ea. from 160 pcs. 0,30 ea.</p>	<p>Same cube as the W-05-N, but plated with real gold. Looks even finer.</p>
<p><b>W-05-N</b> Cube magnet 5 mm Weight: 0,95 g Nickel-plated (Ni-Cu-Ni) Magnetisation: N42 strength: approx. 1,1 kg</p>	<p>Price in EUR 10 pcs. 0,37 ea. from 40 pcs. 0,30 ea. from 80 pcs. 0,27 ea. from 160 pcs. 0,25 ea.</p>	<p>A small cube magnet with 5 mm edge length. Its adhesive force of 1 kg is astounding for such a small magnet. A perfect and extremely discreet fridge or whiteboard magnet - one of our top sellers for good reason.</p>
<p><b>W-05-N50-G</b> Cube magnet 5 mm Weight: 0,95 g Gold-plated (Ni-Cu-Ni-Au) Magnetisation: N50 strength: approx. 1,2 kg</p>	<p>Price in EUR 10 pcs. 0,48 ea. from 40 pcs. 0,39 ea. from 80 pcs. 0,36 ea. from 160 pcs. 0,33 ea.</p>	<p>Same article as W-05-G, but with the strongest possible magnetisation. Primarily interesting for model engine enthusiasts. For everyday jobs (hanging-up notes and photos, etc.), you'd do better with the cheaper W-05-G.</p>
<p><b>W-05-N50-N</b> Cube magnet 5 mm Weight: 0,95 g Nickel-plated (Ni-Cu-Ni) Magnetisation: N50 strength: approx. 1,2 kg</p>	<p>Price in EUR 10 pcs. 0,48 ea. from 40 pcs. 0,39 ea. from 80 pcs. 0,36 ea. from 160 pcs. 0,33 ea.</p>	<p>Identical article to W-05-N, but with the highest magnetisation (N50). Most interesting for builders of model motors. For day to day use (to hang up notes and photos), the cheaper W-05-N is a better fit.</p>
<p><b>W-06-N</b> Cube magnet 6 mm Weight: 1,6 g Nickel-plated (Ni-Cu-Ni) Magnetisation: N42 strength: approx. 1,3 kg</p>	<p>Price in EUR 5 pcs. 0,53 ea. from 15 pcs. 0,45 ea. from 40 pcs. 0,40 ea. from 80 pcs. 0,36 ea.</p>	<p>These cube magnets can hold small notes on a magnetic glass board, on a whiteboard several layers of paper.</p>

<b>W-07-K</b> Cube magnet 7 mm Weight: 2,6 g copper-plated (Ni-Cu) Magnetisation: N42 strength: approx. 1,6 kg	Price in EUR 5 pcs. 0,67 ea. from 15 pcs. 0,58 ea. from 40 pcs. 0,50 ea. from 80 pcs. 0,46 ea.	Strong cube magnets in trendy copper-colour! These magnets shimmer reddish-brown-golden and are the eye-catcher on glass magnetic boards and magnetic boards.
<b>W-07-N</b> Cube magnet 7 mm Weight: 2,6 g Nickel-plated (Ni-Cu-Ni) Magnetisation: N42 strength: approx. 1,6 kg	Price in EUR 5 pcs. 0,67 ea. from 15 pcs. 0,58 ea. from 40 pcs. 0,50 ea. from 80 pcs. 0,46 ea.	Super magnets that can hold it together. They have a proven track record as newspaper holder and bicycle clamp.
<b>W-10-N</b> Cube magnet 10 mm Weight: 7,6 g Nickel-plated (Ni-Cu-Ni) Magnetisation: N42 strength: approx. 3,8 kg	Price in EUR 5 pcs. 1,40 ea. from 15 pcs. 1,22 ea. from 40 pcs. 1,09 ea. from 80 pcs. 1,00 ea.	Cube-shaped magnets are somewhat unusual. These are strong enough to attract each other through the thickness of a hand. It takes a bit of determination to separate two of these magnets from each other.
<b>W-12-N</b> Cube magnet 12 mm Weight: 13 g Nickel-plated (Ni-Cu-Ni) Magnetisation: N48 strength: approx. 6,3 kg	Price in EUR 5 pcs. 2,04 ea. from 15 pcs. 1,79 ea. from 40 pcs. 1,60 ea. from 80 pcs. 1,49 ea.	A fat, strong cube magnet with an adhesive force of 6 kg. Two of these cubes can only be separated with a lot of effort.

## Sphere magnets neodymium

Please note: Due to the danger of swallowing, magnetic spheres are not suitable as toys for children and should be kept out of reach of small children. If they swallow several small magnets, they can accumulate in the intestines and cause life-threatening injuries.

<p><b>K-03-C</b> Sphere magnet Ø 3 mm Weight: 0,11 g Chrome-plated (Ni-Cu-Ni-Cr) Magnetisation: N42 strength: approx. 130 g</p>	<p>Price in EUR</p> <p>20 pcs. 0,41 ea. from 60 pcs. 0,35 ea. from 140 pcs. 0,31 ea. from 360 pcs. 0,27 ea.</p>	<p>Unleash your creativity! With the small magnetic spheres you can always make new creations with little effort. Please let your friends also experiment with them.</p>
<p><b>K-05-C</b> Sphere magnet Ø 5 mm Weight: 0,5 g Chrome-plated (Ni-Cu-Ni-Cr) Magnetisation: N42 strength: approx. 360 g</p>	<p>Price in EUR</p> <p>10 pcs. 0,52 ea. from 40 pcs. 0,43 ea. from 80 pcs. 0,39 ea. from 160 pcs. 0,36 ea.</p>	<p>Sphere magnets with 5 mm diameter.</p>

Giant ring (actually closer to a disc with a drill hole), that is suitable for tying with a piece of cord. You can use this to fish your bicycle (and who knows what else) out of the canal.

## Cone magnets neodymium

These neodymium magnets are cone-shaped. On the small circular area the magnetic field lines are bundled, which gives the magnets a very high adhesive force. They are perfectly suitable for whiteboards, magnetic boards, etc. The stump holds notes securely and it can be easily removed by pulling it off to the side. If the base is attached to a metal surface, however, it is hard to remove.

## Water-proof neodymium magnets: rust-proof & with scratch protection

The neodymium magnets in this group are entirely coated by a layer of rubber, which provides the following advantages:

Scratch protection: Delicate surfaces, such as whiteboards or magnetic glass boards, are well protected

Waterproof: These magnets are rustproof and can be used outdoors as long as the rubber coating stays intact

Friction: The rubber coat substantially increases the magnetic adhesive force in shear direction

Due to the rubber coating the maximum adhesive force of these magnets is slightly lower, however, compared to similar-sized neodymium magnets without coating.

## Sets with neodymium magnets

Please note: Due to the dangers of swallowing magnets, the magnets in this set are not suitable as toys for small children and must be kept out of their reach! If two or more magnets are swallowed they can get caught in the intestines and cause life-threatening injuries.

<p><b>Z-10</b> Macho set Case with 40 super magnets Weight: 1,4 kg/set</p>	<p>Price in EUR 1 set 59,99/set</p>	<p>For men who have everything... For guys who feel no pain... For dudes who are not easily swept off their feet... ... we now have: The supermagnete macho set! 10 large and 30 small super magnets in a tool case.</p>
<p><b>Z-13</b> Sampler set L 9 large neodymium magnets in various shapes and sizes Weight: 330 g/set</p>	<p>Price in EUR 1 set 15,00/set from 3 sets 13,00/set from 10 sets 11,50/set</p>	<p>This sampler set contains 9 very practical larger neodymium magnets. You can choose from strong disc, block and cube magnets for your perfect application without having to purchase a certain amount of each magnet.</p>
<p><b>Z-04</b> Set 114 Set with 114 small magnets Weight: 59 g/set</p>	<p>Price in EUR 1 set 17,02/set from 3 sets 15,44/set from 10 sets 14,03/set from 20 sets 13,31/set from 40 sets 12,72/set</p>	<p>Set with 114 super magnets! You'll receive 30 pcs Q-05-05-02-G, 30 pcs. S-06-02-N, 30 pcs. R-06-02-02-G, 12 pcs. W-05-N, 12 pcs. W-05-G. Purchased singly, these 114 magnets cost almost twice the price - a hit price!</p>

## Sew-in magnets neodymium

Flat neodymium disc magnets, shrink-wrapped in sturdy plastic foil, to sew into clothing. Thanks to the plastic covering, the magnets are water-proof and rust-proof and can be washed and used outdoors and in wet surroundings.

## Screw-on magnets

Flat countersunk neodymium disc and block magnets with one or two boreholes can be fastened with a countersunk head screw. They are only 4 mm thick and therefore very discreet for hanging up signs, tools, etc. Screw-on magnets are very popular in the areas of kitchen installations, booth and store construction, signage technology, furniture construction, etc.

## Countersunk pot magnets screw-on

Distinctive feature: These magnets can be fastened with a countersunk screw.

Principle: The magnets are embedded in a steel pot. The steel pot increases the adhesive force of the magnet on direct contact with a thick iron surface. If there is no direct contact with the counterpart, or if the steel plate is thin, painted or rough, you can strain it much less.

Shear force: The indicated adhesive force was measured perpendicular to the surface to which the magnet should stick. It takes a lot less strength to move the magnet sideways. Therefore, you can strain a pot magnet much less if you use it on a wall as opposed to using it on the ceiling.

Rust: These magnets are not rust-free and therefore intended for dry indoor use.

## Pot magnets with threaded stem

Distinctive feature: These magnets have an external thread.

Principle: The magnets are embedded in a steel pot. The steel pot increases the adhesive force of the magnet on direct contact with a thick iron surface. If there is no direct contact with the counterpart, or if the steel plate is thin, painted or rough, you can strain it much less.

Shear force: The indicated adhesive force was measured perpendicular to the surface to which the magnet should stick. It takes a lot less strength to move the magnet sideways. Therefore, you can strain a pot magnet much less if you use it on a wall as opposed to using it on the ceiling.

Rust: These magnets are not rust-free and therefore intended for dry indoor use.

## Eyelet magnets neodymium

Distinctive feature: These magnets are suitable for securely hanging up objects. The eyelet can be removed. You can choose between silver-coloured and white eyelet magnets. The latter are barely noticeable on white walls and ceilings. The silver eyelet magnets are slightly cheaper and stronger.

Principle: The magnets are embedded in a steel pot. The steel pot increases the adhesive force of the magnet on direct contact with a thick iron surface. If there is no direct contact with the counterpart, or if the steel plate is thin, painted or rough, you can strain it much less.

Shear force: The indicated adhesive force was measured perpendicular to the surface to which the magnet should stick. It takes a lot less strength to move the magnet sideways. Therefore, you can strain a pot magnet much less if you use it on a wall as opposed to using it on the ceiling.

Rust: These magnets are not rust-proof and therefore intended for dry indoor use.

## Glue-in pot magnets

Distinctive feature: These magnets are glued into indentations when screwing is not possible.

Principle: The magnets are embedded in a steel pot. The steel pot increases the adhesive force of the magnet on direct contact with a thick iron surface. If there is no direct contact with the counterpart, or if the steel plate is thin, painted or rough, you can strain it much less.

Shear force: The indicated adhesive force was measured perpendicular to the surface to which the magnet should stick. It takes a lot less strength to move the magnet sideways. Therefore, you can strain a pot magnet much less if you use it on a wall as opposed to using it on the ceiling.

## Pot magnets with rubber coat

Distinctive feature: These magnets have a metric internal screw thread and can be fastened with objects with an external screw thread. The rubber coat protects the sensitive surface from scratches and increases the load capacity in shear direction.

Principle: The magnets are embedded in a steel pot. The steel pot increases the adhesive force of the magnet on direct contact with a thick iron surface. If there is no direct contact with the counterpart, or if the steel plate is thin, painted or rough, you can strain it much less.

Shear force: The indicated adhesive force was measured perpendicular to the surface to which the magnet should stick. Despite the rubber coat, it takes less strength to move the magnet sideways. Therefore, you can strain a pot magnet much less if you use it on a wall as opposed to using it on the ceiling.

Rust: The rubber protects the magnet from occasional moisture and splashing water. Permanent outside use, however, can lead to rusting.

## Pot magnets with cylindrical borehole screw-on

Distinctive feature: These magnets can be fastened with a screw without countersink.

Principle: The magnets are embedded in a steel pot. The steel pot increases the adhesive force of the magnet on direct contact with a thick iron surface. If there is no direct contact with the counterpart, or if the steel plate is thin, painted or rough, you can strain it much less.

Shear force: The indicated adhesive force was measured perpendicular to the surface to which the magnet should stick. It takes a lot less strength to move the magnet sideways. Therefore, you can strain a pot magnet much less if you use it on a wall as opposed to using it on the ceiling.

Rust: These magnets are not rust-proof and therefore intended for dry indoor use.

## Pot magnets with screw socket

Distinctive feature: These pot magnets have a screw socket, into which you can screw hooks, eyelets, etc. We also carry identical hook magnets as well as eyelet magnets.

Principle: The strong neodymium magnets are embedded in a steel pot. The steel pot increases the adhesive force of the magnet on direct contact with a thick iron surface. If there is no direct contact with the counterpart, or if the steel plate is thin, painted or rough, you can strain it much less.

Shear force: The indicated adhesive force was measured perpendicular to the surface to which the magnet should stick. It takes a lot less strength to move the magnet sideways. Therefore, you can strain a pot magnet much less if you use it on a wall as opposed to using it on the ceiling.

Rust: These magnets are not rust-proof and therefore intended for dry indoor use.

## Pot magnets & magnet systems with ferrite magnets

Distinctive feature: These magnets are ferrite and not neodymium magnets. They have therefore a lower adhesive force and are larger. But are cheaper than neodymium magnets and can be used outside as well.

Principle: The magnets are embedded in a steel pot. The steel pot increases the adhesive force of the magnet on direct contact with a thick iron surface. If there is no direct contact with the counterpart, or if the steel plate is thin, painted or rough, you can strain it much less.

Shear force: The indicated adhesive force was measured perpendicular to the surface to which the magnet should stick. It takes a lot less strength to move the magnet sideways. Therefore, you can strain a pot magnet much less if you use it on a wall as opposed to using it on the ceiling.

Rust: These magnets are rust-proof and can therefore be used outside and in wet surroundings as well. The pots surrounding the magnets, however, may develop surface rust over time.

## Screw-on counterparts for magnets

These are no magnets! These metal discs are suitable as counterpart for our magnets, e.g. hook or block magnets with borehole.

They can be easily screwed onto non-magnetic surfaces with a countersunk bolt.

## Glue-on counterparts for magnets

These metal discs are suitable as base for our magnets, e.g. disc or hook magnets. Thanks to the self-adhesive backside, they can be easily attached to smooth surfaces.

## Rubber caps & silicone discs: Skid and scratch protection all in one

These rubber caps can be put over the bottom side of pot magnets to protect delicate surfaces, plus the friction increases the load capacity of the magnet in shear direction.

## Magnetic tape - for labelling, highlighting and marking

You can use these strong magnetised tapes (magnetic strips) in various widths and many different colours to label steel shelves and metal cupboards, etc. They are a colourful eye-catcher on a whiteboard or on magnetic paint. You can cut the tapes to the desired size with regular scissors, and they are easy to write and print on.

## Magnetic adhesive tape for flexible attachments

Self-adhesive magnetic tape can be used to inconspicuously attach non-magnetic objects (e.g. a plastic or aluminium sign) to metal surfaces. The self-adhesive strips also adhere to each other, so you can combine two non-magnetic objects. It's perfect for attaching flexible fly screens to windows and doors.

<b>MT-10-STIC</b> Self-adhesive magnetic tape 10 mm wide Weight: 56 g/m	Price in EUR 1 m 2,11/m from 5 m 1,65/m from 25 m 1,29/m from 50 m 1,17/m from 75 m 1,11/m	The self-adhesive magnetic tape MT-10-STIC can attach non-magnetic objects to metal surfaces. This magnetic tape is 10 mm wide and available in lengths of 1 m, 5 m and 25 m.
<b>MT-20-STIC</b> Self-adhesive magnetic tape 20 mm wide Weight: 110 g/m	Price in EUR 1 m 2,64/m from 5 m 2,10/m from 25 m 1,69/m from 50 m 1,55/m from 75 m 1,47/m	The self-adhesive magnetic tape MT-20-STIC can attach non-magnetic objects to metal surfaces. This magnetic tape is 20 mm wide and available in lengths of 1 m, 5 m and 25 m.
<b>MT-30-STIC</b> Self-adhesive magnetic tape 30 mm wide Weight: 170 g/m	Price in EUR 1 m 2,87/m from 5 m 2,30/m from 25 m 1,87/m from 50 m 1,72/m from 75 m 1,64/m	The self-adhesive magnetic tape MT-30-STIC can attach non-magnetic objects to metal surfaces. This magnetic tape is 30 mm wide and available in lengths of 1 m, 5 m and 25 m.
<b>MT-40-STIC</b> Self-adhesive magnetic tape 40 mm wide Weight: 220 g/m	Price in EUR 1 m 3,66/m from 5 m 2,96/m from 25 m 2,43/m from 50 m 2,25/m from 75 m 2,15/m	The self-adhesive magnetic tape MT-40-STIC can attach non-magnetic objects to metal surfaces. This magnetic tape is 40 mm wide and available in lengths of 1 m, 5 m and 25 m.
<b>MT-150-STIC</b> Self-adhesive magnetic tape 150 mm wide Weight: 830 g/m	Price in EUR 1 m 10,08/m from 5 m 8,43/m from 25 m 7,19/m from 50 m 6,76/m from 75 m 6,53/m	The self-adhesive magnetic tape MT-150-STIC helps to attach non-magnetic objects on metal surfaces. This magnetic tape is 150 mm wide and available in lengths of 1 m, 5 m and 25 m.

## Magnetic sheet for arts & crafts, highlighting and labelling

You can cut out colourful shapes from our magnetic sheets and attach them to whiteboards, for instance, as part of a presentation. Or you can use already punched-out coloured magnetic symbols. With our magnetic pocket you can protect and attach colour-coded statistics and process directives on iron surfaces.

## Questions About Our Web Shop

### **Can I buy super magnets in stores?**

No, we do not maintain a store. We distribute our magnets exclusively through our web shop [<http://www.supermagnete.de/eng/index.php>].

### **Can I pick up my ordered magnets directly?**

We have only a few magnet samples in our offices and our warehouse is managed by an external logistics company. Therefore, it is not possible for you to personally pick up your order.

### **Do you deliver on account?**

We deliver on account to

- Business customers
- Public institutions (schools, museums, universities, etc.)
- Government agencies

We reserve the right to request pre-payment from companies unknown to us or for very large orders.

(See our delivery terms [<http://www.supermagnete.de/eng/conditions.php?highlight=payment>])

### **Do you deliver COD (cash on delivery)?**

Due to the high costs involved in COD, we do not offer this method of payment at present.

## Questions about neodymium magnets (NdFeB)

**What do the specifications N42, N45, N50, etc. mean?**

**The specifications N40, N42, N45, 35H etc. is a measurement for the quality of the magnet material. This tells you two things:**

- How much "magnetic energy" per volume is contained in this magnet material
- Up to what temperature the magnet can be used

The **numbers** (e.g., 40, 42, 45) are equivalent to approximately the maximum energy product [<http://www.supermagnete.de/eng/faq/What-does-maximum-energy-product-mean>] of the magnet (in MGOe).

The **letters** N, M, H, SH, UH or EH say something about the maximum working temperature, which can be 80, 100, 120, 150, 180 or 200 °C. Most of our magnets begin with an "N" and can take temperatures of up to 80 °C. You can find more detailed information under our FAQ What temperatures can magnets sustain? [<http://www.supermagnete.de/eng/faq/What-temperatures-can-magnets-sustain>].

**Magnetisation vs. Size** If you take any two magnets of different sizes and magnetisation from our collection, the difference in their strength is more due to the differences in their volume than the differences in their magnetisation. That's why the larger magnet is mostly the stronger magnet, even when its magnetisation classification is somewhat smaller.

You can find the exact associations between these classifications and the physical values of a magnet in the table Physical magnet data [[http://www.supermagnete.de/eng/data\\_table.php](http://www.supermagnete.de/eng/data_table.php)].

### How strong is this magnet?

As an indication we add the approximate adhesive force in grams or kilograms to the description of our magnets. This is only a theoretical maximum value, which can only be obtained **under ideal conditions**. The actual adhesive force depends on the following factors:

a) Distance between magnet and adhesive surface

If there is no direct contact between the magnet and the object, the adhesive force decreases quickly with increasing distance. Even a small gap of half a millimetre could cut the adhesive force in half. Also, a thin paint cover on the object contributes to a decrease in adhesive force as well.

With our adhesive force tool you can determine the adhesive force at various distances.  
Go to Adhesive Force Tool

b) Direction of the force: The theoretical adhesive force is valid if a vertical force applies, that is, if the object of magnetic attraction is pulled vertically by the magnet. See our FAQ about shear force [<http://www.supermagnete.de/eng/faq/force2#pu601>] c) Material of the object of magnetic attraction: The theoretical adhesive force is valid when the object of magnetic attraction consists of pure soft iron. This value is reduced by about 5% when it comes to structural steel ST37 and approx. 30% with ST70.

d) Surface area of the object of magnetic attraction: The smoother the surface, the greater the adhesive force. For rougher surfaces, you should anticipate a considerable reduction in adhesive force.

e) Thickness of the object of magnetic attraction: The object should not be too thin or a magnetic saturation will be achieved and part of the magnetic field will remain useless.

Generally, you should never depend on our indications regarding adhesive force, but do your own test first.

By the way: If you need the adhesive force in Newton, multiply our specification in kg with 9,81 (A mass of 1 kg equals a weight of 9,81 Newton).

### **Does a magnet weaken over time?**

Under normal circumstances, neodymium and ferrite magnets as well as magnetic tapes and sheets keep their magnetism practically indefinitely.

The following influences can lead to loss of magnetism:

Neodymium magnets [<http://www.supermagnete.de/eng/supermagnete-strong-neodymium-magnets>]

- Heat: Most neodymium magnets should not be exposed to temperatures exceeding 80 °C
- Strong jolts due to repeated blows
- Other strong magnetic fields (e.g. of electromagnets)

Ferrite magnets [<http://www.supermagnete.de/eng/ferrite-magnets>]

- Heat: Ferrite magnets shouldn't be exposed to temperatures above 250 °C
- Cold: Ferrite magnets shouldn't be cooled down below -40 °C
- Strong jolts due to repeated blows
- Other strong magnetic fields: Fields of electromagnets, but also neodymium magnets can demagnetise or reverse the polarity of ferrite magnets. Therefore, neodymium and ferrite magnets should always be stored and transported separately.

Magnetic tapes and magnetic sheets [<http://www.supermagnete.de/eng/magnetic-tape-magnetic-sheet-magnetic-strip>]

- Heat: Tapes and sheets cannot get hotter than 85 °C
- Cold: Tapes and sheets cannot get colder than -20 °C
- Strong jolts from repeated blows
- Other strong magnetic fields: Fields of electromagnets, but also neodymium and ferrite magnets can demagnetise or reverse the polarity of magnetic tapes and sheets. Therefore, they should always be stored and transported separately from other magnets.

## Customer testimonials

**Thanks for the magnets. Thanks especially for the extra magnets. When I was opening the package, first I was detaching S-20-10-N discs from their own package and immediately I got 2 of those magnets stuck to together and I had hard time detaching them. Later i detached those with a flat knife.**

K.H.H.

**Yesterday evening my flat mate got to know the "skin pincher" [Q-20-20-10-N] a bit closer. He yelped like a puppy dog.**

M.S.

**I am so surprised that an Internet order can be executed so painlessly and so fast these days that I just felt I needed to tell you. I wish you many more happy customers.**

F.K.

**The magnets are unbelievable, and of course I have already pinched my fingers (not for the first time ...)**

H.P.

**You guys are crazy! I haven't seen anything like that before.**

S.L.

**Having read the part of your warnings where it says "Don't say you haven't been warned" I let two Q-25-25-13 clash together yesterday while holding my finger between them. One would not believe how much that hurts!!**

J.S.
