

## Application No. 153: Pruning saw on the belt

Author: Miguel Angel Arévalo, Madrid, Spain

### Thanks to the pruning saw on the belt, your hands are free while climbing

I trim trees professionally, and it bothers me that I have to put my saw aside to get branches out of the way. A few seconds later I have to pick it up again. When I am working several meters above the ground, I cannot put the saw down anyway without it dropping to the ground. So, I thought of good application for one of your magnets.

I screwed a countersunk pot magnet ([www.supermagnete.de/eng/CSN-25](http://www.supermagnete.de/eng/CSN-25)) into one of the loops on my security belt. That works pretty well: The magnet is strong enough to keep the saw in place while I have to hold on to a branch for instance. Still, I can detach the saw with a strong yank when I need it.

Too bad aluminum is not magnetic; otherwise I could use magnets to attach my carabiners to the belt.

**Articles used**

1 x CSN-25: Countersunk pot magnet Ø 25 mm ([www.supermagnete.de/eng/CSN-25](http://www.supermagnete.de/eng/CSN-25))

WS-MNP-01: Tool pouch magnetic small (no longer in our assortment!)

WS-MTP-01: Tool belt magnetic large (no longer in our assortment!)

1 x ZTN-25: Pot magnet with cylindrical borehole ([www.supermagnete.de/eng/ZTN-25](http://www.supermagnete.de/eng/ZTN-25))
